Marine Benthic Vegetation | SpringerLink

marine benthic vegetation recent changes and the effects of eutrophication The benthic zone is the ecological region at the lowest level of a body of water such as an ocean, lake, or stream, including the sediment surface and some sub-surface layers. Organisms living in this zone are called benthos and include microorganisms (e.g., bacteria and fungi) as well as larger invertebrates, such as crustaceans and polychaetes. Organisms here generally live in close ...

marine benthic vegetation recent changes and the effects of eutrophication PDF | Benthic algal vegetation was investigated at 10 sites in Isfjorden, Svalbard. Five sites were visited during summer 2010 and five during summer 2012. Both the littoral and sublittoral ...

(PDF) Benthic algal vegetation in Isfjorden, Svalbard

marine benthic vegetation recent changes and the effects of eutrophication Benthos is the community of organisms that live on, in, or near the seabed, river, lake, or stream bottom, also known as the benthic zone. This community lives in or near marine or freshwater sedimentary environments, from tidal pools along the foreshore, out to the continental shelf, and then down to the abyssal depths.
