

marine biology a very short introduction

### **marine biology a very pdf**

marine biology a very short introduction Marine biology is the scientific study of marine life, organisms in the sea. Given that in biology many phyla, families and genera have some species that live in the sea and others that live on land, marine biology classifies species based on the environment rather than on taxonomy.. A large proportion of all life on Earth lives in the ocean. The exact size of this large proportion is unknown ...

marine biology a very short introduction Marine ecosystems are the largest of Earth's aquatic ecosystems and are distinguished by waters that have a high salt content. These systems contrast with freshwater ecosystems, which have a lower salt content. Marine waters cover more than 70% of the surface of the Earth and account for more than 97% of Earth's water supply and 90% of habitable space on Earth.

marine biology a very short introduction Systems that increase the rate of exchange Fick's law shows that for a fast rate of diffusion you must have a large surface area, a small distance between the source & the destination, and maintain a high concentration gradient. All large organisms have developed systems that are well-adapted to achieving these goals, as this table

marine biology a very short introduction The literature on marine debris leaves no doubt that plastics make-up most of the marine litter worldwide (). Though the methods were not assessed to ensure that the results were comparable, Table 1 clearly indicates the predominance of plastics amongst the marine litter, and its proportion consistently varies between 60% and 80% of the total marine debris (Gregory and Ryan, 1997).
