marine biology of polar pdf

marine biology of polar regions and effects of stress on marine organisms proceedings of the 18th european marine biology symposium university of oslo norway 14 20 august 1983
Marine biology is the scientific study of marine life, organisms in the sea. Given that in biology many phyla, families and genera have some species that live in the sea and others that live on land, marine biology classifies species based on the environment rather than on taxonomy. A large proportion of all life on Earth lives in the ocean. The exact size of this large proportion is unknown ...

marine biology of polar regions and effects of stress on marine organisms proceedings of the 18th european marine biology symposium university of oslo norway 14 20 august 1983
Marine mammals are aquatic mammals that rely on the ocean and other marine ecosystems for their existence. They include animals such as seals, whales, manatees, sea otters and polar bears. They do not represent a distinct taxon or systematic grouping, but rather have a polyphyletic relation due to convergent evolution, as in they do not have an immediate common ancestor.

1. Introduction. The marine environment in the Canadian Arctic is truly vast and diverse. It includes deep basins and large shelves of the Arctic Ocean, many fjords, channels and straits in the Arctic Archipelago, Hudson Bay (the largest northern inland sea) and large, productive polynyas such as the North Water Polynya in Baffin Bay and the Bathurst Polynya in the Beaufort Sea.

Systems that increase the rate of exchange Fick's law shows that for a fast rate of diffusion you must have a large surface area, a small distance between the source & the destination, and maintain a high concentration gradient. All large organisms have developed systems that are well-adapted to achieving these goals, as this table

Rate of diffusion surface area x concentration difference

marine biology of polar regions and effects of stress on marine organisms proceedings of the 18th european marine biology symposium university of oslo norway 14 20 august 1983 We've all seen the pictures of polar bears stranded on sea ice. They're all too often used as the iconic poster animals of a rapidly changing climate. Yet every now and again, claims emerge in the media that polar bears' plight might not be so serious after all. Carbon Brief has dug through the literature and spoken to polar bear experts.
