marine bioprocess engineering proceedings of an international symposium organized under auspices of the working party on applied biocatalysis of the european federation of biotechnology and the european society for marine The word "yeast" comes from Old English gist, gyst, and from the Indo-European root yes-, meaning "boil", "foam", or "bubble". Yeast microbes are probably one of the earliest domesticated organisms. Archaeologists digging in Egyptian ruins found early grinding stones and baking chambers for yeast-raised bread, as well as drawings of 4,000-year-old bakeries and breweries.

Our research focuses on problem alcoholic fermentations and spoilage microorganisms of concern to winemakers. Problem alcoholic fermentations are those where utilization of fermentable sugars by wine yeast is slow and/or undesirable off-odors and flavors are produced.

In terms of land use, microalgae followed by palm oil biodiesel are clearly advantageous because of their higher biomass productivity and oil yield.

The occurrence of two or more cases of a similar illnesses resulting from the ingestion of a common food is known as a food-borne disease outbreak. This includes a number of routines that should be followed to avoid potential health hazards.
