#### **marine ecotoxicology pdf**

marine ecotoxicology Ecotoxicology is the study of the effects of toxic chemicals on biological organisms, especially at the population, community, ecosystem, and biosphere levels. Ecotoxicology is a multidisciplinary field, which integrates toxicology and ecology.. The ultimate goal of this approach is to be able to reveal and to predict the effects of pollution within the context of all other environmental factors.

marine ecotoxicology The water flea *Daphnia magna* is a small planktonic cladoceran. *D. magna* has been used as a model species for ecotoxicology, as it is sensitive to

environmental stressors and environmental changes. Since Daphnia is affected by culture environment and each population/strain has its own ecological and genetic characteristics, its population/strain-based genome information is useful for ...

marine ecotoxicology Some diatoms of the genera Pseudo-nitzschia and Nitzschia produce the neurotoxin domoic acid (DA), a compound that caused amnesic shellfish poisoning (ASP) in humans just over 30 years ago (December 1987) in eastern Canada. This review covers new information since two previous reviews in 2012. Nitzschia bizertensis was subsequently discovered to be toxicogenic in Tunisian waters.
